TECHNICAL SKILLS

Frontend

React TypeScript

JavaScript HTML

CSS

Backend

Node.js Express

.NET (in progress) C#

Databases

MySQL PostgreSQL

MongoDB

Tools

Git/GitHub VS Code

Postman Swagger

Docker

Quality Assurance

API & UI testing

Test case design

Defect reporting

SOFT SKILLS

- Problem-solving & critical thinking
- Collaboration & teamwork
- Adaptability & continuous learning
- Technical communication
- Time management & organisation

PROFILE

Software Developer with hands-on experience across the full stack, working with React, Node.js, .NET, and C# to build web applications and backend systems. I'm especially drawn to writing code that solves real problems and makes products genuinely easier and more enjoyable to use — and I'm constantly picking up new tools to stay sharp and keep growing as a developer.

WORK EXPERIENCE

Software Development Intern

March 2026 – Present

YellowDot SA · Fourways, Johannesburg

YellowDot SA is a mobile technology company partnered with MTN, Telkom, Vodacom, and Cell C to deliver digital content — trivia and gaming, video portals, subscriptions, and smart messaging (SMS/USSD) — to subscribers across South Africa's major networks.

- Develop across the full stack (React, Node.js, .NET) on a multi-tenant SaaS platform used to manage services, partners, and marketing campaigns for network operator clients
- Design and build backend and frontend features end-to-end, from requirements through to production deployment
- Run daily QA on live trivia games, writing detailed test cases and reports that feed directly into release decisions
- Collaborate cross-functionally with frontend and backend teams, writing detailed test cases and coordinating handoffs

SMS Campaign System — World Cup Trivia Predictor

Built a Node.js batch-processing system to run a targeted SMS campaign for a FIFA prediction/trivia game, reaching 200,000+ MTN subscribers. The system streams large subscriber datasets, validates and de-duplicates phone numbers, segments users by subscription status (active, grace, suspended), and sends personalised messages through the MTN-Kannel SMS gateway.

Campaigns UI — Service Delivery Platform

Built the Campaigns feature of a multi-tenant SaaS platform used internally to manage services, partners, and marketing. Enabled non-technical staff to create and manage marketing campaigns end-to-end — linking each campaign to the right mobile network operator, content provider, and affiliate, setting budgets, and tracking everything from an individual campaign profile page.

Tenant Permissions API — Service Delivery Platform

Designed and built a permissions system controlling what each client (tenant) can access on the platform, with tiered access levels (view-only, full control, etc.). Delivered the full backend API — create, list, view, revoke — validated it against a live database including edge cases like access upgrades and revocation, and took it from local testing through staging to production, working closely with the frontend team via clear API documentation.

EDUCATION

 **Software Engineering Bootcamp (Code College)**

Full Stack Software Development

Code College · Jan 2025 – Nov 2025

Certifications: Intro to Programming, Python, HTMX, Node.js, React, MERN, SQL, Java (Beginner & Advanced), Spring Framework, Java Bootcamp Certificate, Web Development Bootcamp Certificate

National Senior Certificate

Sutherland High School · Class of 2021

PERSONAL PROJECTS

VibeMetrics

2026 – Present

An automated reporting tool for South African social media freelancers and agencies, replacing manual client reporting with a fast, automated alternative. Currently building the core architecture, integrating the Meta Graph API to pull Facebook/Instagram performance data, and using the Claude API to auto-generate client reports.

Stack: Node.js, React, TypeScript, PostgreSQL, Meta Graph API, Claude API, Paystack

Supply Chain API with Role-Based Security

November 2025

A Java/Spring Boot API for managing enterprise logistics, with role-based access control across Admins, Suppliers, Warehouse Managers, and Customers. Covers user management, inventory, and order flows behind a proper security layer — built as a realistic backend foundation for a company looking to streamline its supply chain.

Stack: Java, Spring Boot, PostgreSQL, Flyway
